When to refer to urogynecology

Send patients at whatever stage you are ready to send them. No workup, imaging, or trial of therapy is required first — if you would rather we start from the beginning, that is exactly what we are here for. Urology and urogynecology overlap, and I work alongside both urology and general OB-GYN colleagues. The pelvic floor is usually the common denominator when bladder symptoms appear together with prolapse, bowel symptoms, or a vaginal bulge.

REFER WHEN YOUR PATIENT SAYS

- "I'm leaking urine."
- "I always feel like I have to go."
- "Something is falling or bulging."
- "I feel pressure or heaviness in my pelvis."
- "I can't make it to the bathroom in time."
- "I've had multiple UTIs this year."
- "I'm having bowel control issues."
- "I can't empty my bladder completely."

NO WORKUP NEEDED — BUT DON'T WAIT ON THESE

- Prolapse at or beyond the hymen
- Pessary declined, failed, or poorly tolerated
- Incontinence persisting after a trial of pelvic floor PT
- Recurrent UTI with incomplete emptying
- Any mesh complication or exposure
- Prior failed prolapse or incontinence repair

Everything else is welcome just the same. Mild, early, undiagnosed, or already worked up — send them along and I'll send you the plan.

WHAT I TREAT, AND HOW

Conditions

- Stress, urge, and mixed urinary incontinence
- Pelvic organ prolapse and vaginal bulge
- Overactive bladder and recurrent UTI
- Fecal incontinence and pelvic floor dysfunction
- Mesh complications and failed prior repairs

Treatment

- Pelvic floor physical therapy
- Pessary fitting and ongoing management
- Bladder training, behavioral therapy, medication
- Minimally invasive and robotic reconstruction
- Prolapse repair and incontinence procedures

ABOUT

Kyle Norris, MD

Board-certified in Obstetrics & Gynecology; board-eligible in Urogynecology and Reconstructive Pelvic Surgery. Fellowship, University of Alabama at Birmingham. Medical Director of Surgical Services, Baylor All Saints-Andrews.

McKenna Steele, FNP-C

Nurse practitioner. Many patients prefer to start here — she can evaluate fully and begin most treatments the same day.

You will receive a **consultation note after the first visit and after any procedure.** Happy to discuss a patient before you refer — message me on Doximity, or call the office.
